Bholu Shubhankar Anokha

New Delhi, India
+91 7903071173 bholushubhankaranokha@gmail.com LinkedIn

Education

Bhagwan Parshuram Institute of Technology **Aug 2022 – June 2026**
B.Tech in Artificial Intelligence and Data Science (CGPA: 8.26) *New Delhi, India*

Chhotu Ram Polytechnic **July 2019 – July 2022**
Diploma in Electrical Engineering (77.70%) *Haryana, India*

Harihar Singh Academy **April 2018 – May 2019**
Class 10th (69.40%) *UP, India*

Skills

Programming Languages: C, C++, JavaScript, Java, Python
AI/ML & Deep Learning: Machine Learning, Deep Learning, CNN, RNN, LLM, NLP, LSTM, Bi-LSTM, Model Evaluation, Data Preprocessing, RAG, Gen AI
Libraries: NumPy, Pandas, Matplotlib, scikit-learn, TensorFlow, Keras, PyTorch
Web Development (MERN Stack): HTML, CSS, Tailwind CSS, React.js, Redux, Node.js, Express.js, MongoDB, REST APIs
IoT & Hardware: Arduino, ESP32, Sensors Integration
Tools: Git/GitHub, Google Colab, VS Code, Postman, Tinkercad

Experience

Vibhum Software **July 2024 – Aug 2024**
Web Developer Intern *Remote*

- Developed and optimized web applications and REST APIs for Ostrichfit.com improving performance and system efficiency.
- Worked on frontend and backend integration ensuring responsive UI and smooth API communication.

Projects

RescueAI: AI-Based Flood Victim Detection System | *Python, Computer Vision, Deep Learning*
- Developed an AI-powered disaster response system to detect stranded people in flood situations using computer vision models.
- Utilized deep learning techniques for human detection from aerial imagery and live camera feeds.
- Integrated real-time alert mechanisms to assist rescue teams in locating victims quickly during disasters.
- Designed the system to support drone-based surveillance for faster and safer rescue operations.

Bi-Directional LSTM Weather Forecasting System | *Python, TensorFlow, Keras*
- Implemented a Bi-LSTM model for time-series forecasting of weather conditions.
- Applied sequence modeling techniques and normalized large datasets for improved deep learning performance.
- Compared LSTM and Bi-LSTM results to enhance prediction stability and accuracy.

Smart AI-Based Air Quality Monitoring System | *Python, IoT, ESP32*
- Developed an AI-powered air pollution detection system using gas sensors and ESP32.
- Applied machine learning algorithms to classify AQI levels and predict pollution trends.
- Integrated cloud-based monitoring and real-time data visualization dashboard.

RADAR System using Arduino | *Arduino, Embedded Systems*
- Designed a mini RADAR system using ultrasonic sensors and servo motors for object detection.
- Visualized real-time object distance data using serial communication interface.

Weather App | *HTML, CSS, JavaScript*
- Built a responsive weather application using public weather API for real-time temperature, humidity, and wind speed data.
- Implemented geolocation-based weather detection and global city search functionality.
